INSTALLATION INSTRUCTIONS

DISASSEMBLY

Be sure to measure ride height before and after install for a true measurement of the total height lifted. We recommend using a piece of blue painters' tape on the front and back fenders. To find the before measurement, take a tape measurer and measure from the ground to the bottom of the fender well lip. Write that measurement on the blue tape. This step will be repeated once the lift is installed.

STEP 1:

Jack up front of van so the front wheels are off the ground and place jack stands under the frame behind the front bumper. This is for safety while you are completing the installation of this lift kit. Remove front wheels using a 22mm socket.

STEP 2:

Put jack under LCA so the coil spring does not pop out.

Disconnect the ABS line

**Note: Do not remove shock until spindle is installed*

STEP 3:

Remove tie rod end from spindle 21mm

Break tie rod loose with hammer

DISASSEMBLY**STEP 4:**

Remove brake caliper bolts 21mm

Place brake caliper aside on hanger toward rear of vehicle

Before moving 10mm bolt holding brake line to spindle, remove bracket from brake line by bending it open

**STEP 5:**

Remove brake rotor

**STEP 6:**

Loosen lower spindle ball joint nut 24mm, leave nut threaded

DISASSEMBLY**STEP 7:**

Loosen upper spindle ball joint nut 18mm, leave threaded

**STEP 8:**

Break ball joints free with hammer

**Note: Must hit REALLY hard*

**STEP 9:**

Remove upper and lower spindle nuts

DISASSEMBLY**STEP 10:**

Place a jack under the lower control arm.

Loosen upper shock nut with 15mm and a pair of vise grips to hold shock still

**Note: You may need to use prybar or tap with hammer from backside*

**STEP 11:**

Un-bolt lower shock bolts 13mm remove shock

Remove swaybar link

Remove coil.

**STEP 12:**

Put spacer on top of coil and put both inside coil bucket.

Jack up lower arm to get coil in place

DISASSEMBLY**STEP 13:**

Place new shock in place

Thread top nut in place

Tighten lower 13 mm shock bolts

**STEP 14:**

Tighten upper shock nut 19mm (if installing a new fox shock) 15mm if old shock is being used

**Note: Top shock mount should be snug! Do not crush bushings. This will lead to shock failure.*

****Double check on ground****

**STEP 15:**

Place on bench and remove hub from spindle bolts using a 15mm

ASSEMBLY**STEP 16:**

Separate hub from spindle.

**Note: You may need to use prybar or tab with hammer from backside*

**STEP 17:**

Red thread locker on all 4 hub bolts and bolt new spindle to hub using a 15mm

**STEP 18:**

Install hub on new WeldTec Designs 3" lift spindle

FRONT INSTALLATION (START ON DRIVER SIDE)**STEP 19:**

Place new spindle in lower control arm

Thread lower ball joint nut

Note: Before installing upper ball joint, move brake caliper back so brake line is behind spindle

**STEP 20:**

Use a prybar to push upper arm down to install ball joint in spindle

**STEP 21:**

Thread upper ball joint and tighten

FRONT INSTALLATION**STEP 22:**

Torque upper and lower ball joints upper 18mm

REAR INSTALLATION - PROGRESSIVE LEAF SPRINGS**STEP 10:**

To enable the front of the leaf springs to fit, the leaf spring perch will need to be cut.

With a marker and ruler to mark 1 3/4" on front leaf perch. Use cut off wheel to cut front perch.

Use a sanding disk to grind smooth. Spray paint to avoid rust in the future

**STEP 11:**

Install new leaf springs with stock hardware. When reinstall hardware use screw driver or punch to guide bolt through

Snug all hardware on leaf springs. You will fully tighten bolts once vehicle is back on the ground

REAR INSTALLATION - PROGRESSIVE LEAF SPRINGS**STEP 13:**

Place new U bolts in place with nuts threaded on u-bolt carriage

Tighten u-bolts with 24mm

**STEP 14:**

Place new shocks in place and tighten top upper bolts with a 13mm

**STEP 15:**

Tighten lower shock bolts when you are done installing both sides with a 21mm.

REAR INSTALLATION - PROGRESSIVE LEAF SPRINGS**STEP 16:**

Put the rear wheels and tires back on and lower the jacks. Once on ground tighten leaf spring hardware a final time

Now take the tape measurer and measure from the ground to the bottom of the fender lip and write the new ride height on the blue painter's tape that was placed on the fenders before started the install. If everything was done correctly, a true 5 inches of lift should be the result.

Congratulations! You have now installed the Chevrolet Express 5" Kit!

You are now ready to take your van to the alignment shop.
